

Operational Description of the equipment

To make it easier to setup the Wireless Base Station Trimersion when hooking it to a console game system, start the game as normal with the original controller then when the game is going, unplug the controller, plug in the wireless base station Trimersion to the controller port then turn on the gun. Do not plug in the USB connector into anything but a computer USB port. Even though game consoles have USB connectors on them; the one on the wireless base station Trimersion is not intended to be used for that purpose, only the controller connectors.

PRODUCT	Wireless Base Station Trimersion
MODEL NO.	TR101
POWER REQUIREMENTS	DC 5V, 160 mA
FREQUENCY BAND	2400 ~ 2483MHz
CARRIER FREQUENCY	CH0: 2414~CH3:2468MHz
CHANNEL SPACING	18MHz
RF OUTPUT POWER	15dBm
MODULATION TYPE	FM
DUTY CYCLE	8%
NUMBER OF CHANNEL	4
BIT RATE OF TRANSMISSION	Real Time
MODE OF OPERATION	Simplex
ANTENNA TYPE	Integral Antenna+PCB Antenna
OPERATING TEMPERATURE	-20~55 °C
